**ED Priapism**

**Patient Care**
- Compression therapy
- 19 g, 20 g, 21 g, butterfly needles, 10 mL syringe, 3-way stop cock at bedside with a 10 mL syringe
- Lidocaine 1% 10 mL vial with needle and syringe for administration
- Lidocaine 2% 10 mL vial with needle and syringe for administration
- Bupivicaine 0.5% 10 mL vial with needle and syringe for administration

**Labs**
- CBC
- Urinalysis
- Cavernosal blood gas analysis
- Urine drug screen
- Sickle cell prep

**Imaging**
- US with doppler flow of penis

**Low Flow (vaso-occlusive) priapism**

**Oral Medication**
- Pseudoephedrine 60 mg orally
- Pseudoephedrine 80 mg orally

**Subcutaneous medications**
- Terbutaline 5 milligram subcutaneously
- Terbutaline 10 milligram subcutaneously

**Intracavernous Injection**
- 10 mg of phenylephrine in 499 mL of 0.9% Sodium Chloride which yields a 20 mcg/mL solution. Inject 1 mL though a 19g butterfly needle into one side of the corpus cavernosum. Repeat every 3 to 5 minutes until resolution of for 1 hour. Bring meds to bedside.

**Intracavernous Irrigation**
- Intracavernous Irrigation with 500 mL of 0.9% normal saline bring to bedside
